LRC25 – Quick Dry Filler

The Quick Dry Filler is rapid drying liquid leather filler, that dries clear in colour, it can be sprayed on to create the effect of grain if required.

The Quick Dry Filler is a unique repair compound used to fill in surface abrasions, scuffs and holes in leather. Quick Dry filler is designed for use in high wear areas, like seat bases, cushions, car seat bases, car seat bolster, arms of chairs and sofas etc. It's a medium consistency quick drying filler and so it can be easily rubbed into the damage of the leather, allowing it to hold the leather fibres tightly together creating a strong repair as well as a smooth one.

This quick dry filler has a unique property to it which means if can spray this out of a spray gun, by adjusting the spraying pressure so it's spitting out the quick dry filler can create the effects of grain on the surface.

With the quick dry filler, you can apply this onto a protected painted leather surface to create a grain pad, once fully cured just peel off and on the underside is the impression of grain which can be used as a grain plaster.

This filler is great for doing final repairs on leather also where you have used a heavy filler or flexi filler repair compound and you require a final layer to finish off a very fine visible line in the repair this can be used to level out that repair and blend this in.

The quick dry filler can be applied with a spatula or even sponged on to create a stipple affect like grain, the filler dries very quickly and was designed for the technician in mind to speed up the process of carrying out a repair job.

Due to its low viscosity this means the filler self-levels into the grain making repairs level out better and far easier.

This filler can also be placed into a spray gun and then spray on the quick dry filler with a spitting affect to create a grain like structure on the surface of the leather to repair bigger areas of damage where the leather has gone smooth.

With this type of filler drying is always carried out using a hairdryer or left to dry at room temperature. As it air cures, it's best to keep the lids closed at all times to avoid this quick dry filler from drying up.

Once the filler is fully cured the area can be sanded using a 280-grit foam sanding pad. Foam sanding pads are far safer for leather compared to general sandpaper they also allow you to use a stronger grit paper with the same affects as a finer grade paper.

When you sand over, wipe the area down carefully with a [terry towel cloth](#) with a small amount of alcohol cleaner on it to wipe away any dust from sanding.

It cannot be grained with a grain matt or heat cured with a heat iron, can only be dried with a hairdryer.

The thicker you apply the longer it will take to dry, but if applied thinly then drying times are around five to ten minutes.

Take a look at the [YouTube Video](#) about this product.

Available sizes, 15ml – 0.5fl oz, 50ml – 1,70 fl oz, 100ml – 3.4fl oz 250ml – 8.5 fl oz, 500ml – 17fl oz

Use Within, Use within 12 months of purchase.

Manufacturers Warranty 12 months from point of sale.

Temperatures, do not allow to freeze or go below 7 °C.

Before Use, always check in a small hidden area before using to ensure its suitability for the leather.

Colour, off white.

Smell, has no specific aroma.

Drying Time, around 5 minutes depending how thickly applied.

Formula, a water based thin liquid.

Skin Allergies, if you have skin allergies always wear gloves, wear goggles when applying.

Cautions, Harmful if swallowed. Keep out of reach of children, may cause skin irritation. Seek medical attention at once, do not induce vomiting. Avoid contact with eyes, rinse cautiously with water for several minutes. Remove contact lenses, if present and easy to do so, continue rinsing.
