LRC47 – Renew Leather Restorer

The Renew Leather Restorer is designed to re colour damaged leather and seal all in one, it's a leather paint that self-seals.

The self-sealing leather repair paint can be used for multiple things, from a simple scuff in a leather item, to colour loss due to fading or colour loss from being sun bleached.

Due to the unique strengths and qualities of these self-sealing leather repair paints, they are high grade professional products designed to give a tough yet flexible finish to the surface that's the same as that when the leather item was tanned originally and made into a leather skin.

These are to be used where a full colour restoration is not wanted or you just wish to brighten up an interior, they cannot be colour matched with samples, they are designed to be applied thinly so this way you don't see a colour variation.

The surface would need to be cleaned with a leather cleaner, then wiped over with alcohol cleaner, give it a light sand with a 280-grit foam sanding pad and then wipe down again with the alcohol cleaner. Once you have carried this out you are ready to apply Renew to the surface.

Wipe Renew in, to give an even coating to the item you are bringing back to life, then stipple the colour on to even out any lines, the initial coating can be applied slowly in circles and or lines, which ever you feel more comfortable with and what gets you the best results without causing too much streaking on the surface.

This product can be applied by spray gun if you wished to, but the first layer must be applied by hand, if you wanted to give the revived coating an even longer life span then you can apply a clear coat lacquer over the top.

If you have any slight imperfection in the surface or small bits of dust have landed in the re new paint, then these can be sanded out with 1200 grit sanding paper.

Renew is not designed to restore the surface perfectly like the Leather Repair Paints will, its purpose is to revive the colour and give it a fresh new look again, it will colour cracking in but won't do any self-filling as it's a thin paint designed to work like a colour wash would, colour wash the surface to bring it back to life again.

Instructions.

- 1 Clean all the surface down with our leather cleaner
- 2 Very lightly sand with 280 grit foam sanding pad
- 3 Wipe over with alcohol cleaner
- 4 Shake the bottle well to make sure the colours are mixed together
- 5 Apply the colour to a sponge and wipe over a single coat
- 6 Allow to dry. You may use a hairdryer to speed up the process
- 7 Apply a second coat by following the same process as well as some stippling action to make the colour blend in.
- 8 If you're going to use a spray gun, only use it after you've finished the first layer with a sponge. For the first coat, never use a spray gun.
- 9 Once you've finished, apply the leather protection cream to lock in the colour
