LRC4 Leather Protection Cream

The Leather Protection Cream is suitable for use on all types of leather except suede and nubuck, it is great for aniline leathers because it repels stains. With aniline being an absorbent leather, the leather protection cream will help prolong the life of your leather keeping it looking new much longer.

If your aniline leather is brand new, it's advised to protect this now to help avoid staining in the future. When it's new it has no barrier of protection on at all, so it's advised to give your aniline leather a good few coats of Protection Cream.

It can be used on all different types of leather items and is exceptional when used on car interiors and furniture around the home, office or in a bar.

It has a special built in advanced technology molecule system that helps prevent stains from water based and oil-based products, it also helps prevent premature wear and tear taking place on your leather surface.

The Leather Protection Cream, conditions, protects, adds protection barriers that help against water, sun, spills, heat and stains, as well as infusing that genuine leather smell into your leather item again.

Apply a small amount of Protection Cream to a small application pad and gently massage into the leather in a circular motion, allow this to dry naturally and once dry buff the products to lock in the barriers of protection and UV protectors. You don't have to buff the surface, this can be left looking natural and a nice dull matt finish, if buffed this can produce a slight sheen if required.

For aniline leathers it's best to apply two to three coats to provide a strong barrier of protection against stains and spills.

The Leather Protection Cream helps reduce wear taking place as the barrier of protection helps keep your leather safe and protected from abrasions from clothing rubbing against it, which can cause damage over a period of time.

The protection cream also adds an invisible barrier of protection to help prevent stains taking place with its special technology. It provides waterproofing properties to the leather to help stop spot stains from water, drinks and food.

The protection cream can also be used on vinyl surfaces to help prevent cracking taking place.

Preserving: Keeping the leather protected at all times will preserve all old and new leathers. With older leather it's more important that they are kept protected to avoid them drying out. With modern leather you can only protect them as they are sealed compared to older leathers, so keeping the modern leather surface coating protected is essential as this will extend the life of the leather considerably.

Repels Stains: With the Leather Protection Cream, once this has been applied, it's adding a barrier of protection that will help stop stains from taking place on your leathers surface. Built in intelligent protection the coating has a sophisticated protection layer that stops all types of stains from taking place.

Conditions: With its built-in natural oils and waxes, the protection cream conditions the leather to stop drying out taking place. With regular conditioning this will keep the leather soft and supple, this helps prevent cracking and other types of damage taking place.

Leather is best protected four times per year, each time you protect it's best to clean first to remove any build ups. Cleaning will give you a fresh start again, just applying more protection cream could lock in dirt and grime causing wear to take place. So every season, clean your leather, then apply fresh protection cream. The below picture will help you understand more why your leather should be protected.

Take a look at the [YouTube video](#) about this product

Available sizes, 100ml – 3.4 fl oz, 250ml – 8.5 fl oz, 500ml – 17 fl oz, 1ltr – 34 fl oz, 5ltr – 176 fl oz
