LRC53 Leather Juice

Leather Juice is a coating system, designed to stop stains and keep leather cleaner for longer and will slow down damage, cracking and ageing.

Manufactured using the latest technology to protect modern leather and exotic leathers.

The leather juice protection system is a very thin watery type of product that is white in colour.

The molecule system within leather juice will bond to the leather, leaving behind a protective coating, keeping the leather soft and supple.

A natural, non-toxic, environmentally sustainable product, the ultimate stain protector, helps stop and prevent most stains from things like, coffee, wine, juices, curry, food, suntan lotion, chips, fake tan, make up, jean dye, newspaper print and many more.

The leather needs to be fully deep cleaned and dry before this coating is applied, so start by vacuuming off your leather or vinyl item, thoroughly deep clean all the surface and allow to dry naturally, never force dry leather as this can cause staining.

Leather Juice is designed to bond to the hide itself forming this coating barrier that allows the hide to breathe correctly while stopping stains and dirt build up, makes cleaning a great deal easier with a simple wipe down every now and then. Ceramic coatings cause the leather to dry out quicker by sealing the skin, stopping the leather skin from breathing causing the fat liquors to evaporate fully, speeding up the ageing process cracking and stiffness in the leather hide to appear.

Once leather juice has been applied it's like a traditional ceramic coating in that it requires maintenance to keep its protection strong and durable. LRC4 leather protection cream can be applied over the top of LRC53 leather juice or LRC38 leather protection spray. You would only require a single application of LRC38 once a year, whereas LRC4 can be applied once a month to give a fantastic protection. In affect it's a preservation system for the coating.

Leather is a lot more delicate than people think it is, it's not like car paint at all, it requires a great deal of care and attention to maintain that new look and feel.

With leather juice one or two initial applications is all that's required, do not think applying more is better as this will have the reverse effect on your leather and create a problem itself, make sure each coating applied is even and free from streaks and fully dry prior to the next coating being applied.

Instructions.

Applying Leather Juice is simple and easy to carry out.

Before you can apply leather juice to your item this has to be deep cleaned and free of damage.

Carry out a full deep clean on your item.

Then when your item is fully dry you can apply the leather Juice system to your leather item.

It's best applied in a circular motion making sure you do not leave streaks on the surface when it's fully dried. Only a thin coating is required, spray this onto an application pad and rub on in a circular motion to ensure all areas are covered without leaving streaking behind.

Once completely dried you can apply a protection cream to the surface to give even greater protection if required.

250ml of leather juice will be enough to cover 2 x car interiors or a large 3-piece suite

500ml of leather juice will be enough to cover the equivalent of 5 car interiors or 2 x 3-piece suites

1 ltr of leather juice will be enough to cover 10 car interiors or several 3-piece suites.
