LRC5 Leather Detailer Spray

The Leather Detailer Spray is suitable for use on all types of leather except suede and nubuck.

It's best used in between cleans and protections as a top up system but works perfectly as a standalone protection item. Can be used as often as you wish so if you have guests coming and want to give that fresh new leather smell to your home then give your item's a quick spritz to freshen up your furniture.

It can be used on all different types of leather items and is exceptional when used on car interiors and furniture around the home, office or in a bar. For aniline leather you are best using LRC4 Leather Protection Cream.

With car interiors the Detailer Spray can be used as often as you wish, it's a great product for using on cars where you wish to retain that genuine leather aroma in your interior along with that soft touch and clean look and smell. It can be used every time you wash your car to freshen up your interior.

It's best to deep clean your leather before using LRC5 Leather Detailer Spray with LRC1 Leather Cleaner or if you have handbags, purses or jackets your better off using LRC6 or LRC7 Aniline care products. Give your items a deep clean, working in a circular motion to remove all dirt and grime and wipe away with a soft Bamboo Fibre Cloth. Once your items have been deep cleaned you can then use the detailers spray as often as you wish, we would just advise to deep clean once every 3 to 4 months.

It's the perfect product to give your handbags and purses a quick spray over before going out, just in case you get caught in the rain, the detailers spray will give you that protection you need to avoid your arm candy from being ruined.

The Leather Detailer Spray, conditions, protects, adds protection barriers that help against water, sun, spills, heat and stains, as well as infusing that genuine leather smell into your leather item again.

This product can be used on faux leathers, vinyl's and vegan materials, with any fake leather it's always best to proceed with caution with cleaning or protecting.

Spray a small amount of detailer spray directly to the leathers surface or onto a small application pad and gently massage into the leather in a circular motion. This can also be worked in with a brush as the detailer spray cleans and protects in one. Once dry buff the products to lock in the barriers of protection and UV protectors. You don't have to buff the surface as this can be left looking natural and a nice dull matt finish, if buffed this can produce a slight sheen if required.

The Leather Detailer Spray helps reduce wear taking place as the barrier of protection helps keep your leather safe and protected from abrasions from clothing rubbing against it, which can cause damage over a period of time.

The detail spray also adds an invisible barrier of protection to help prevent stains taking place with its special technology, it provides waterproofing properties to the leather to help stop spot stains from water, drinks and food.

Keeping the leather protected at all times will preserve all old and new leathers. With older leather it's more important that they are kept protected to avoid them drying out. With modern leather you can only protect them as they are sealed compared to older leathers. So, keeping the modern leather surface coating protected is essential as this will extend the life of the leather considerably.

Repels Stains: With the Leather Detailer Spray, once this has been applied, it's adding a barrier of protection that will help stop stains from taking place on your leathers surface.

Built in intelligent protection the coating has a sophisticated protection layer that stops all types of stains from taking place.

With its built-in cleaning capabilities, the detailer spray cleans and conditions the leather to stop drying out taking place. This will keep the leather soft and supple; this helps prevent cracking and other types of damage taking place.
