

Filler Repair Kit

Use this document to help with application of the Leather Repair Company Filler Repair Kit.

To repair a hole or bad scratch on leather, first you would prep the area (Leather Prep not included), then allow to dry, apply the filler with the spatula and smooth out as you go, dry with a hairdryer.

If the hole is deep apply several thin layers, drying as you apply each layer. Then sand with the double-sided pad and finish off the sanding with the single sided sheet.

Once you are happy with your filler repair colour as normal (colour not included)
