**Removing
Pet Scratches.**

How To Remove Pet Scratches

Removing cat or pet scratches is easy.

Step 1

The first is where the pet scratches the leather by plucking out the fibres from the leather substrate creating little pull-ups of loose leather, these will stand proud of the leather surface and feel rather rough.

Step 2

The second is where the pet will scratch the leather causing a more straight-line scratch, without puncturing the surface at all.

Repairing damaged leather where pets have scratched the surface or created small pucks is possible if you are looking for a permanent repair **NEVER** use our colouring enhancer balm to carry out this job.

There are a few items that you will require to successfully repair pet scratches in your leather:

Pet Scratch Repair Kit
(depending on the area you may need a bigger kit)

Heavy Filler
(this can be a coloured filler or just white)

Protection Cream

Spatula

Leather Glue Repair Kit
